

JOB Description for Angular Developer

Position	Jr. Angular Developer
Location	Mumbai
Job Purpose	Responsible for Web Front End Development using Angular

We are now living in the Fourth Industrial Revolution (Industry 4.0). The term "Industrial Revolution 4.0" refers to the intelligent networking of machines and processes in the manufacturing sector, which is accomplished via the use of information and communication technologies. This is accomplished by the integration of multiple technologies such as smart instruments, automation, cloud computing, the internet of things, and big data collection and analysis.

As a small but important component of the Industry 4.0 change, we at Go Digital Technology Consultants have joined forces with a large American electric power and natural gas holding company to assist them in developing data analysis solutions for their power grid. Load forecasting, fault prediction, renewable infusion into the grid, SCADA, smart grid applications, billing, and customer maintenance are all examples of what is possible now in the industry. These are just a few examples of applications where we can easily use the latest tools and technologies to showcase Dashboard and Analytics on Web applications. Front end web architects are responsible for a variety of tasks, including developing and designing front end web architecture, ensuring the responsiveness of applications, and collaborating to create web design features, among other things.

If this sounds interesting to the Web Application Developer in you, we invite you to join us and help develop the future of resource management now.

Ideally, the applicant should be a recent graduate or have relevant experience in an Application Development capacity, and have a graduate degree in computer science, statistics, informatics, information systems, or related quantitative subject as a minimum. Also necessary is prior knowledge of and expertise with the following applications and tools:
